

Trillions are being invested in AI's promise of transformation.

But many organizations are seeing little change or value.

The problem is not the technology. It's the gap between AI strategy, systems, and execution.

We close this gap by helping you answer these questions.

AI STRATEGY

How do we move from AI adoption to AI transformation?

AI strategy is treated as a technology initiative. It's time to think bigger.

We define a bold AI strategy guided by ambitious vision and a roadmap grounded in thorough analysis of your current state.

- **See beyond your industry** based on our cross-industry research, leadership network, and experience.
- **Turn your content into an AI advantage** by recognizing it as the knowledge layer powering AI.
- **Quantify the transformation gap** through our specialized assessments and proprietary ContentWRX data.

AI SYSTEMS

How do we power AI with the right information?

AI is often deployed on top of problematic content or data, disconnected tools, and broken workflows. It's time to embrace systems.

We plan and build systems to make your content and data AI-ready at scale.

- **Engineer the knowledge layer** by reducing content debt. We improve architecture, models, metadata, governance, and workflows across structured and unstructured information.
- **Build the right AI ecosystem.** We help you select and integrate AI and content technologies into a cohesive environment
- **Orchestrate content systems** with ContentIQ®. Our superagent enables ongoing content analysis, strategy, execution, and optimization at scale.

AI VALUE

How do we turn AI into lasting business impact?

AI is often piloted but not measured or scaled. It's time to rethink execution for achieving value.

We plan and implement operations to enable AI and measure results.

- **Operationalize what works** based on our decade of research into ops success factors.
- **Turn measurement into momentum.** Our frameworks assess performance and accelerate progress toward value.
- **Scale with confidence.** We combine governance, change management, and enablement to sustain transformation.

Bold Strategy. Better Systems. Breakthrough AI Value.
